The other guys are making some great chairs. The last few years have seen the introduction of some great ergonomic task seating.

They're just a little complicated. You need to negotiate a complicated set of controls just to get comfortable. Most people sit down and get to work, ignoring the chair's wellconsidered, but complex, technology. Raptor is different. We designed Raptor to be as comfortable as possible, for as many people as possible, without requiring you to do much of anything.

Chairs like this don't just happen. They start with a lot of research. That's where we discovered that although tilt tension is one of the most important aspects of chair performance, people rarely knew how to set it properly. So our designers went to work devising a chair with an automatic and dynamic tilt-tension adjustment.

Here's how it works. Technically, it's called an inverse synchro-tilt mechanism.

All that means is that as you recline, Raptor makes two adjustments to keep you comfortable. First, it raises the back of the seat, so you can keep your feet on the floor, where they belong. Second, it opens the angle between your torso and your legs, which redistributes your weight and improves circulation. Because your back is always touching the back

E' possibile scegliere tra una gamma di differenti modelli di ruote, disponibili in versione libera, autotrenante e gommata.

Tutte le ruote garantiscono la massima funzionalità e sicurezza a contatto con i pavimenti esistenti, e sono tutte rigorosamente testate nel rispetto delle normative internazionali.

La gamma delle basi è proposta in 10 modelli girevoli. I materiali di produzione variano a seconda della tipologia di base: le girevoli sono disponibili in nylon, metallo cromato o verniciato, metallo con rivestimento in polipropilene. Le cantilever si realizzano in metallo cromato o verniciato.

It is possible to choose from a range of different wheel models available in free, self-braking and rubber-coated versions.

All the wheels guarantee maximum functionality and safety in contact with existing floor types and are all stringently tested in compliance with international regulations.

The range of bases comes in 10 swivel models, with wheelbase diameter

The production materials vary according to the type of base: the swivel models are available in nylon, chromium-plated or painted metal and metal with polypropylene coating.

The cantilever models are made of chromium-plated or painted metal.

Sono disponibili sette modelli di colonne con pompa a gas per la regolazione in altezza del sedile suddivise in normali e con cono ridotto.

Tutte le colonne vengono testate e sottoposte a collaudi per garantire la massima sicurezza in base alle normative vigenti.

Il cono è abbinabile a tutti i tipi di colonne ed il copricolonna è disponibile in versione telescopica a stadi che si adegua all' altezza del sedile. Per gli sgabelli ci sono inoltre tre modelli di anelli poggiatesta telescopici, sia in metallo cromato che in versione plastificata antiscivolo. Seven column models are available with gas pump for seat height adjustment, normal and with taper. All the columns are tested to guarantee maximum

safety in compliance with current standards. The column cover can be combined with all version which adapts to the height of the chair. For the stools there are also three models of telescopic foot ring in both chromium-plated metal and non-slip plastic-coated version.
